

A service dispute, documented

A concise example of what an evidence review could contain

Sample data only. Times are simulated; photo GPS and invoice-time crew location are unavailable.

01 INVOICE SNAPSHOT

Front and backyard mowing, trimming, edging and cleanup

Service date: Oct 7, 2026 | Example invoice version 1

Service	\$65.00
OSB Fee – one paid service stop	\$2.90
Fictional tax assumption	\$0.00
TOTAL SHOWN ON SAMPLE DRAFT	\$67.90

02 SERVICE AND INVOICE TIMELINE

9:06 AM	Crew arrival
9:14 / 9:18	Front and back before photos
10:27 / 10:31	Front and back after photos
10:39 AM	Service marked complete
10:45 AM	Draft invoice created – not sent or paid

All timeline values are simulated sidecar data, not verified device EXIF or service logs.

03 WHAT IS INCLUDED – AND WHAT IS NOT

- Included: invoice summary, service sequence, four photos, and location field report.
- The separate offline sample also has the original PNGs and a hash manifest.
- Not established: customer delivery, payment, or a processor dispute submission.
- Invoice-time crew geotag: unavailable; no observation supports a location.
- Photo time and position: no verified EXIF; timestamps below are illustrative.

A real dispute packet must be assembled from authenticated, retained source records.

PHOTO EXAMPLES

Before and after, side by side

Original generated training images are shown without cropping

Sample data only. Times are simulated; photo GPS and invoice-time crew location are unavailable.

Front yard – before

Simulated capture 9:14 AM

Generated image; no verified EXIF or GPS

Front yard – after

Simulated capture 10:27 AM

Generated image; no verified EXIF or GPS

Back yard – before

Simulated capture 9:18 AM

Generated image; no verified EXIF or GPS

Back yard – after

Simulated capture 10:31 AM

Generated image; no verified EXIF or GPS

LOCATION AND PROVENANCE

See page 3 for the location fields. No GPS observation was captured in this sample.

These images and timestamps illustrate a proposed package; no real service or camera capture occurred.

What the records actually show

Time, coordinates, and source kept distinct

Sample data only. Times are simulated; photo GPS and invoice-time crew location are unavailable.

04 ARRIVAL AND LOCATION

Arrival	9:06 AM – simulated timeline event
Property	Fictional job address, not a crew GPS fix
Latitude / longitude	Not captured in this sample
GPS accuracy / source	Not captured in this sample
Invoice-time position	Unknown – no location observation

An arrival time alone does not establish the phone's coordinates.

05 MACHINE-READABLE FIELD EXAMPLE

```
{
  "event": "crew_arrival",
  "local_time": "09:06", "time_source": "simulated",
  "latitude": null, "longitude": null,
  "accuracy_meters": null,
  "location_observation": "not_captured",
  "invoice_location": "unavailable"
}
```

06 IF A REAL LOCATION IS RECORDED

Retain the actual latitude, longitude, observed timestamp, accuracy, and source.

Tie each observation to the correct job and user with access controls.

Keep original files/metadata separately if their authenticity becomes important.

Never infer crew location at invoicing from an earlier arrival or property address.
